

Cyngular's Value Proposition

Cyngular Security is transforming the way Security Operations Centres (SOCs) and IR teams safeguard cloud and multi-cloud environments. Our all-in-one platform combines **six** powerful capabilities to deliver unmatched value – providing the most **comprehensive, cost-effective**, and **efficient** solution for modern **Cloud-SOC and IR (Incident Response) challenges**.

IR Readiness • Achieve full readiness with **100%** coverage over **100%** of your assets **100%** of the time. Cyngular acts as a continuous watchdog, ensuring SOC teams are always prepared to respond, not just during incidents but continuously.

Situational Awareness • Gain real-time, comprehensive visibility into multi-cloud environment, enabling faster, more informed operational decision-making.

Threat Hunting & Deception (CDR + TDIR) • Proactively hunt for threats and deceive attackers, turning the tables before they strike.

Investigation (CIRA) • The most complicated and time-consuming process, but Cyngular shrinks it to under 2 minutes, drastically speeding up response time and improving efficiency.

Response • AI-driven capabilities helps rapidly mitigate and contain threats, ensuring swift, automated response.

IR Reporting • AI-driven incident reports generation in less than **2** minutes, compared to the traditional 7-14 days and up to \$250K of manual effort.

Cyngular achieves all of this with an **agentless approach, read-only permissions, multi-tenancy architecture and deployment in as little as 30 minutes**, **reducing time, money, headcount, and most importantly, risk** allowing SOC & IR teams to work faster and smarter than ever before.

THIRDhub IS A GROUND-BREAKING COMPREHENSIVE PLATFORM THAT DRAMATICALLY REDUCES THE MEAN TIME TO DETECTING, UNCOVERING, INVESTIGATING, AND RESPONDING TO ANY THREAT OVER YOUR CLOUD ENVIRONMENT.

“

Cyngular helps us comply with the new SEC regulations by providing a fully automated AI-driven IR report within a click for every suspicious activity in our cloud environment.”

CISO, NASDAQ Corporate

“

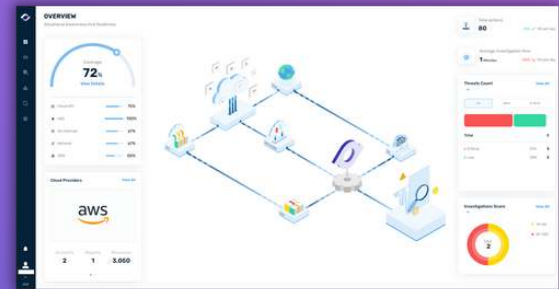

With Cyngular I regained the security control over our cloud environment, without effort or resource allocation.”

Head Of IR | Enterprise Telecom Company

SIGNIFICANTLY REDUCE THE MEAN TIME TO DETECT, UNCOVER, INVESTIGATE, AND RESPOND TO CLOUD CYBER THREATS

A security team's main goal is to reduce the mean time to detect, as well as uncover, investigate, and respond to any cyber threat. Yet they grapple with security measures that mainly provide them with alerts, alerts, and more alerts.

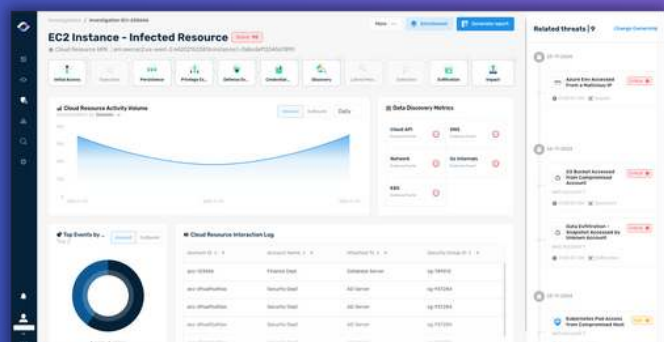

This “alert flood” results in a challenge. How do you distinguish between false alerts and those that point to an emerging threat?

TO UNCOVER A THREAT, ALL ALERTS MUST BE INVESTIGATED – ALL OF THEM.

This challenge is exacerbated when the cloud is involved. That’s because the cloud works in a way that is much faster, more complicated, and has its own unique attack Tactics, Techniques, and Procedures (TTPs).

The reality is that most analyst teams are short-staffed, facing hundreds of alerts daily, often choosing between missed threats or deploying solutions. **Cyngular’s THIRDhub** automates and streamlines these complicated time-consuming **investigation actions**, helping CISOs sleep better at night.

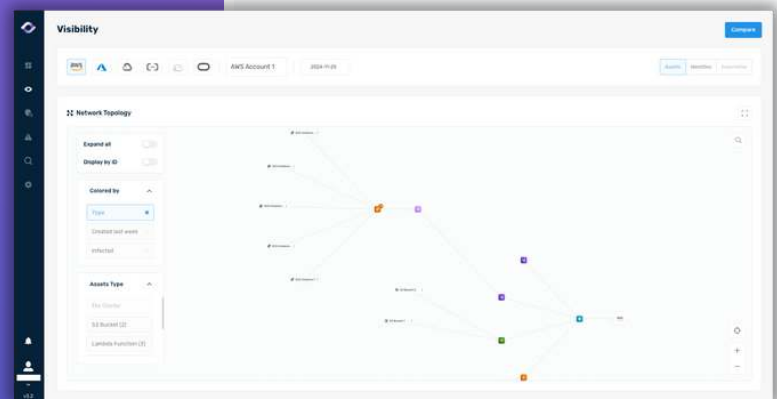

INTRODUCING THIRDhub

- ✦✦ **THIRDhub** is a SaaS B2B comprehensive platform for multi-cloud SOC & IR analysts.
- ✦✦ **THIRDhub** significantly shortens the Mean Time To Detect, Uncover, Investigate and Respond to cloud threats, by harnessing the power of AI & ML.
- ✦✦ **THIRDhub** provides complete Situational-awareness, IR Readiness, autonomous Threat-Hunting, automatic full DFIR investigation, effective Response and smart Deception to **empower** SOC & IR analysts and other security measures like **SIEM,SOAR,EDR/XDR**, and **CNAPP**.
- ✦✦ **THIRDhub** goes a step beyond Cloud Investigation and Response Automation (termed CIRA by Gartner), by including deception and Threat Detection Incident Response (termed TDIR + CDR by Gartner) all in one solution.
- ✦✦ Other cloud security measures taken together are not sufficient, as such cloud security measures create alerts that **need investigation** to separate the signals from the noise. Cyngular's THIRDhub smoothly integrates with these security measures or stands alone based only on cloud-native telemetry.
- ✦✦ **THIRDhub** is a multi-cloud, multi-tenant, **perfect for SOC, IR & MDR service providers**, agentless solution, automatically deployed within **15 min**, and uses read-only permissions.

**WITHOUT THIRDhub,
GETTING INSIGHTS WITHIN
A REASONABLE TIMEFRAME
IS AN IMPOSSIBLE MISSION.**

THIRDhub provides the SOC & IR analyst with fast, accurate **investigation** results and **insights** about malicious activity in seconds, without spending precious time and effort.

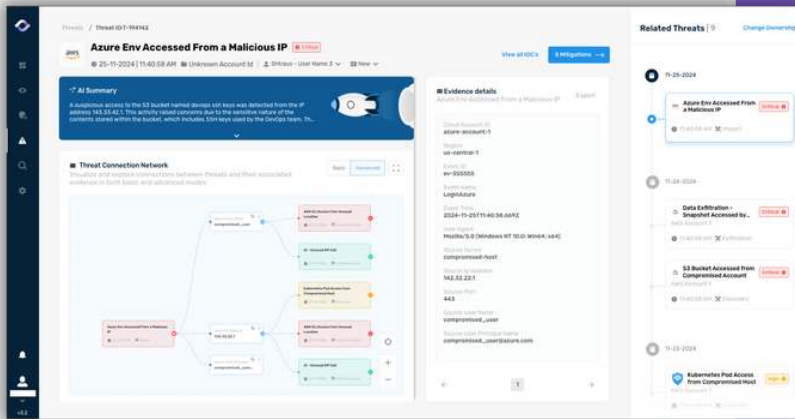

Cyngular.
Uncover.
Investigate.
Deceive.
Respond.
Win!

BUSINESS BENEFITS

- Transforms alerts into insights
- Facilitates regulatory compliance including SEC and others like HIPAA, SOC2
- Builds stakeholders' trust with enhanced AI reporting
- Prioritize threat handling and oversees IR readiness level

TECHNOLOGICAL CAPABILITIES

- Discovers and visualizes your cloud topology
- Enables single pane view of multi-cloud / multi-tenant environments
- Automatic full investigation in minutes - DFIR
- Accelerates and streamlines response time
- Auto generation of an AI driven IR report
- Enhances situational awareness and IR readiness
- Easy integration and deployment

KEY FEATURES

- Agentless, read-only permissions
- Deployment in minutes
- Pre-Integrated with EDRs / SIEM / SOAR / CSPM / SSPM / DSPM / CNAPP
- Full visibility into cloud topology, change management and IR readiness
- Mitigation actions recommendations
- Rest API available for easy integration

USE CASES

FOR SOC ANALYSTS INT / EXT

THIRDhub saves SOC analysts from manual work, freeing up critical time, and empowering them to accomplish more with existing resources.

FOR SOC, IR & MDR SERVICE PROVIDERS

THIRDhub lets service providers focus on quality over quantity, delivering better SLAs, insights, and fully investigated results while saving time and resources.

ABOUT CYNGULAR DESIGNED TO EMPOWER SOC ANALYSTS

Cyngular was founded by ex government, military, aerospace, and defense cybersecurity experts.

Our product stems from decades of nationwide Incident Response expertise on a nationwide scale.

Cyngular has offices in New York City, Atlanta and Tel Aviv.
